

Coconut Powder Production Line

Description:

We are one of the best-known manufacturers and exporters of coconut milk processing plants. We are committed to be a one-stop-shop and provide comprehensive solutions to the coconut milk processing industries. Engaged in manufacturing & fabricating of industry specific processing machines in various standard ranges we cater to several food processing industries. We also nurture the capability to design and develop new innovative machines for specialized coconut milk processing requirements. Our range of coconut processing plants can be specially designed for coconut flesh grating, milk extracting, etc.

The advanced machinery & plants that we fabricate cater to the product development need of several manufacturers who produce desiccated coconut, coconut cream, coconut milk and spray dried coconut milk powder & more. These products when manufactured using advanced technology & upgraded plants hold a good market not only in India but also in various other countries. This is so, because better manufacturing process increases productivity, product quality & also offers economical cost of production.

The wide variety of coconut cream & coconut milk manufactured from coconut processing plants are used in various food preparation. They add flavour & aroma to the desired preparation. In addition to industrial usages where they are used as ingredients in several coconut flavoured food products, they are also used as a substitute to milk extracted from raw kernel in domestic applications. The extracted milk is available in variety of packaging like cans, pouched, and aseptic packages.

We also cater to the plant set-up requirement of spray dried coconut milk powder manufacturing units. These milk powders hold the advantage of long shelf life, lesser storage place requirement and lower cost of bulk packing. Our range of machinery also is suitable for instant coconut milk powder & desiccated coconut powder manufacturing units.

Furthermore, our in-depth industry experience has enabled us to fabricate plants for manufacturing of vinegar from coconut water which is a highly feasible project.

Coconut Powder Production Line can make the Advantage of Coconut Powder:

1. With good dispersion and solubility.

- 2.Enhance the dissolving of milk powder.
- 3.Higher sodium caseinate, provide better price.
- 4.Can use lactose as a carrier,more suitable for formula milk powder.

Features

Coconut Powder Production Line is designed to utmost perfection. Excellent construction design and operational ease features of this plant are further enhanced with its smooth and hassle free operations.

The manufacturing process has the following steps

Shell removing

Extracting

Filtering

Concentrating

Spraying drying

Vibrating fluid bed drying .

Sieving

Package
